

Synchrony Systems is a leader in providing solutions for enterprises looking to modernize their legacy applications. Synchrony's leading conversion technology has been used by the top F100 companies to port their applications to a Rich UI environment. You will be joining Synchrony at a key point in its growth. Having grown successfully for the past 10 years, Synchrony is experiencing huge demand for its products and services and the successful candidate will be a key hire and is expected to significantly contribute to the company's on-going success.

Project Manager

As the lead Project Manager for Synchrony Systems, you will be responsible for successful project delivery of Synchrony engagements. The successful candidate will provide hands-on leadership and direction to the project team as well as manage client relationships. This is a hands-on consulting delivery role. You will be responsible for tracking and reporting related results, and continue to hone the projects so that they meet or beat customer expectations. P The ideal candidate will have a strong background in the project management of software and services as well as excellent process development skills. You must possess a blend of business and technical savvy and be comfortable working directly with engineering teams -- you will be responsible for managing, measuring, reporting and iterating all processes associated with the software development life cycle across multiple projects and multiple customers.

Responsibilities

- Manage project deliveries and schedules to ensure the successful completion of all projects, as well as internal product development features and enhancements
- Leading all phases of project work through pre-sales, proposal development, and solution delivery activities; staffing and managing consultants who will be organized in engineering, systems integration, training, and testing teams
- Driving the development task level project plans; requirements management; communications management; contract management; financial management; issues and actions management; risk management; and resource management.
- Ability to develop and maintain project documentation to specifically address project scope, deliverables, project plans, cost tracking, resource usage, issue tracking and status reports
- Develop effective business process improvement initiatives
- Develop metrics and measurement process to evaluate timeliness and quality of deliveries
- Build positive relationships and trust over time through strong on-time delivery, high quality, continuous innovation, and by exceeding expectations

Requirements

- 6+ years of experience as a Project Manager
- Ability to create project plans and manage to them, develop and monitor project schedules and timelines to identify and meet critical milestones
- Experience managing multiple projects with competing priorities
- Ability to interact with diverse groups of technical and non-technical staff
- SCRUM Master, Mingle expertise, PMP certification a plus

- Management consulting experience with global system integrators such as IBM/GBS, CSC, Accenture preferred.
- Razor-sharp attention to detail, unwavering commitment to quality
- Motivated self-starter, ability to work well independently, good problem-solver, and strong analytical and organizational skills.

Telecommute position, but may require some travel to end-user client locations.

Salary commensurate with experience.

Health benefits included.
